

# T-Series Precision Linear Actuators

## Installation and Service Manual

DW110353GB-1805 – EDITION 7

**THOMSON™**

*Linear Motion. Optimized.*

[www.thomsonlinear.com](http://www.thomsonlinear.com)

**Version History**

Edition Number	Edition Date	Reason for Revision
1	2004	First edition
2	2005-02-10	Updated with new T90 versions
3	2006-05-19	Figure numbering corrected
4	2007-04-17	Lubrication instructions updated
5	2010-05-05	T60 and T130 with 50 diameter screw added, style updated
6	2013-08-29	Data corrected in various places.
7	2018-01-29	Magnet and magnet sensor data updated

Technical changes to improve the performance of the equipment may be made without notice!

## 1. Type designation system

### T60, T90 and T130

1	2	3	4	5	6
T09-B	2525	M	P	045	S1
<b>1. Model</b>					
T06-B = T60 unit T09-B = T90 unit T13-B = T130 unit					
<b>2. Ball screw diameter, lead and tolerance class</b>					
2505 = 25 mm, 05 mm, T7 (only possible for T06-B and T09-B) 2510 = 25 mm, 10 mm, T7 (only possible for T06-B and T09-B) 2525 = 25 mm, 25 mm, T7 (only possible for T06-B and T09-B) 2550 = 25 mm, 50 mm, T7 (only possible for T06-B) 3220 = 32 mm, 20 mm, T7 (only possible for T09-B) 3232 = 32 mm, 32 mm, T7 (only possible for T09-B) 4010 = 40 mm, 10 mm, T7 (only possible for T13-B) 4020 = 40 mm, 20 mm, T7 (only possible for T13-B) 4040 = 40 mm, 40 mm, T7 (only possible for T13-B) 5010 = 50 mm, 10 mm, T7 (only possible for T13-B)					
<b>3. Engineering unit</b> M = metric					
<b>4. Type of adapter</b>					
N = M16 × 1,5 outside thread (only possible for T06-B25 ** and T09-B25 **) P = M16 × 2 inside thread (only possible for T09-B25 **) Q = M20 × 1,5 outside thread (only possible for T09-B32 **) R = M20 × 1,5 inside thread (only possible for T09-B32 **) S = M27 × 2 outside thread (only possible for T13-B40 **) T = M27 × 2 inside thread (only possible for T13-B40 **) U = M33 × 2 outside thread (only possible for T13-B40 ** and T13-B5010) V = M33 × 2 inside thread (only possible for T13-B40 ** and T13-B5010) X = M30 × 2 inside thread (only possible for T13-B40 **)					
<b>5. Ordering length (L order)</b> *** = distance in cm					
<b>6. Protection option<sup>1</sup></b> S1 = wash down protection					
<sup>1</sup> Leave blank if no protection option required.					

Table 1: Type designation system

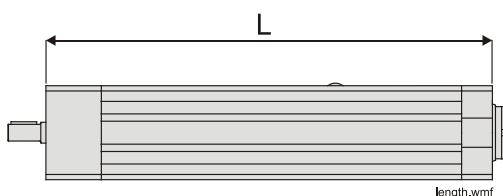

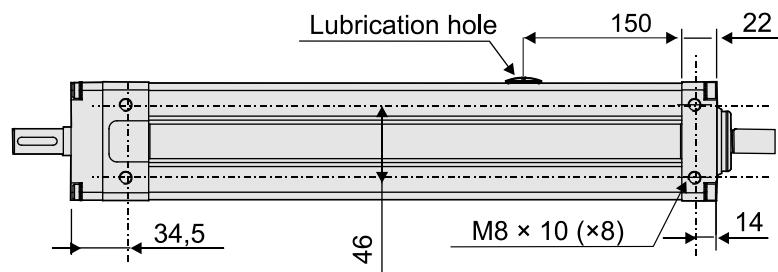

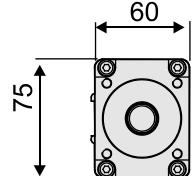

Figure 1: definition of ordering length L

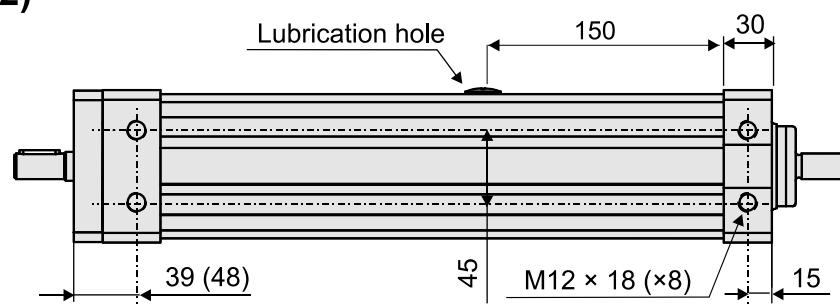

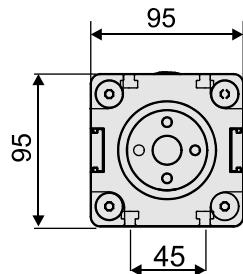

## 2. Installation

### 2.1 Mounting instructions

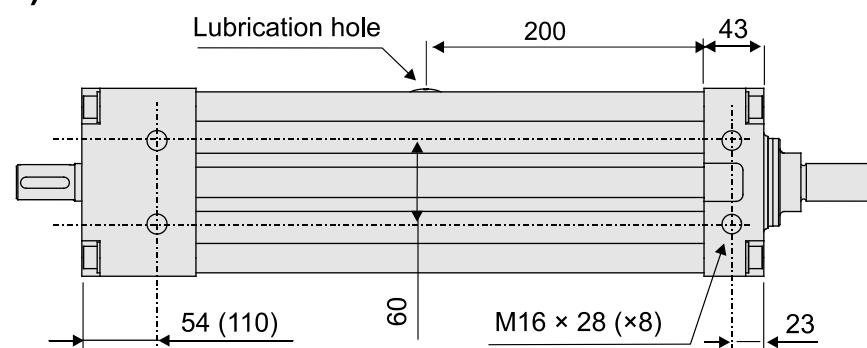

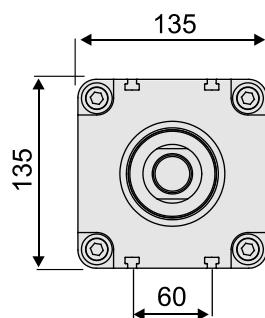

#### 1 T06-B25

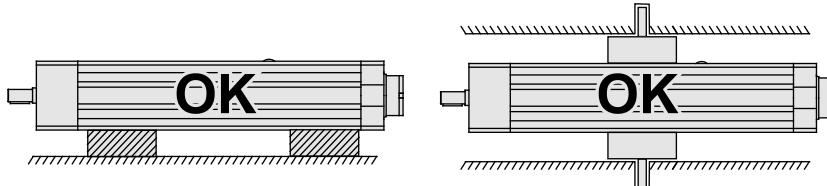

#### T09-B25 (T09-B32)

#### T13-B40 (T13-B50)

#### 2

mounting\_2013.wmf

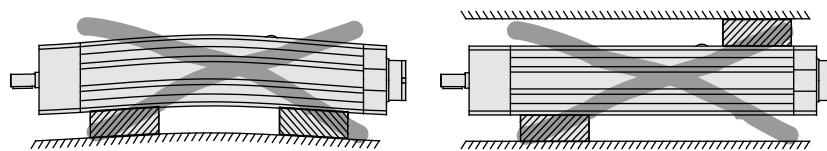

Figure 2: mounting instructions

1. The actuators have threaded holes in the front and rear housings and T-slots along the profile that can be used for mounting. Be sure to mount the actuator so that the lubrication hole is accessible.
2. Only mount the actuator to one side if not trunnion mounting is used. Do not mount the actuator so that the profile is deformed.

## 2.2 Connection of load

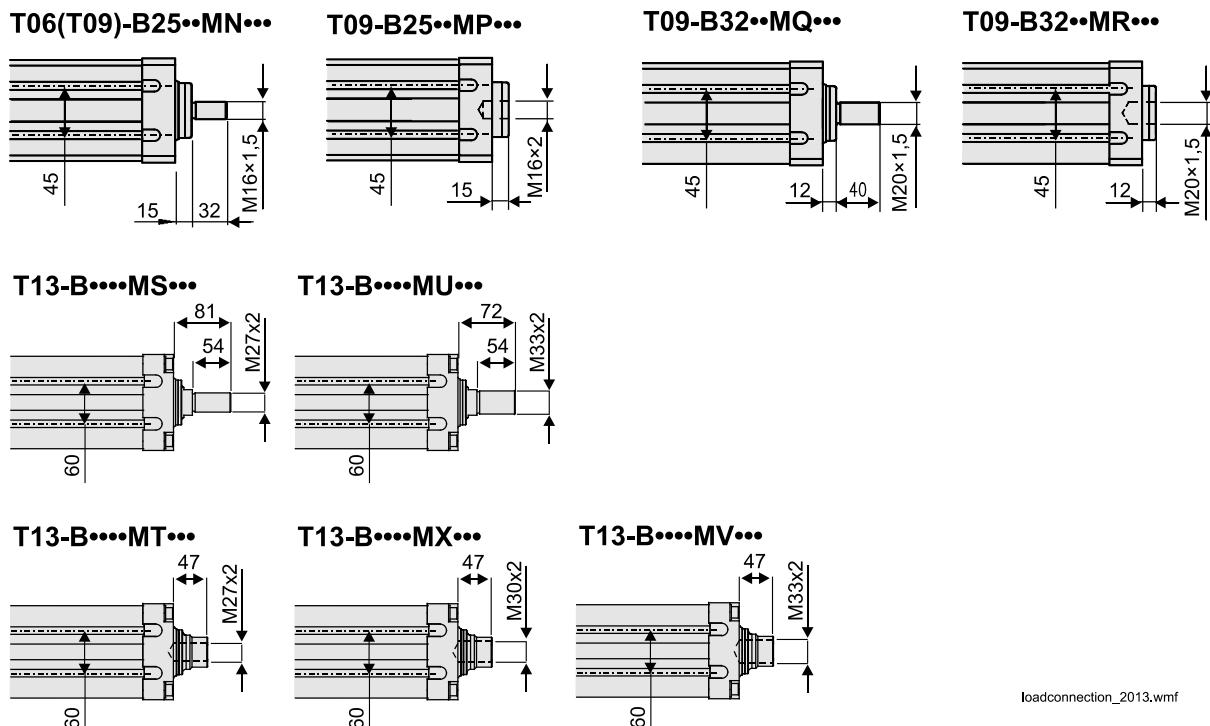

Figure 3: connection of load

## 2.3 Motor flange

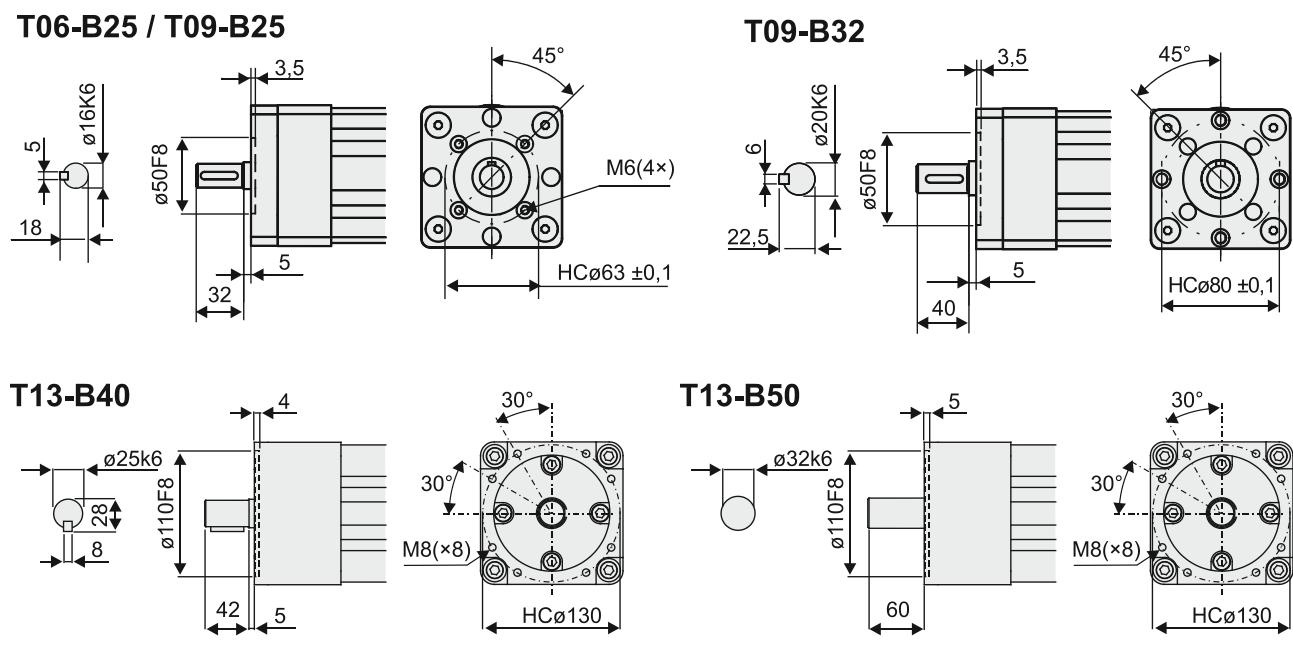

Figure 4: motor flanges

## 2.4 Feet mounting kit

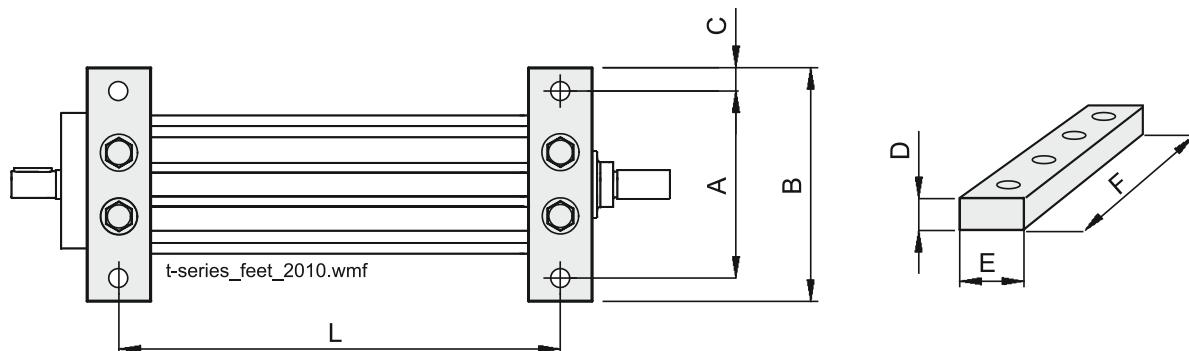

Figure 5: mounting feet

	A	B	C	D	E	F	L	Tightening torque [Nm]				
<b>T06-B25</b>					- on request -							
<b>T09-B25</b>	125	155	15	20	40	155	Smax + 141	78				
<b>T09-B32</b>	125	155	15	20	40	155	Smax + 162	78				
<b>T13-B40</b>	176	220	22	30	60	220	Smax + 216	220				
<b>T13-B50</b>	176	220	22	30	60	220	Smax + 292	220				

Table 2: mounting feet dimensions

## 2.5 Trunnion mounting kits

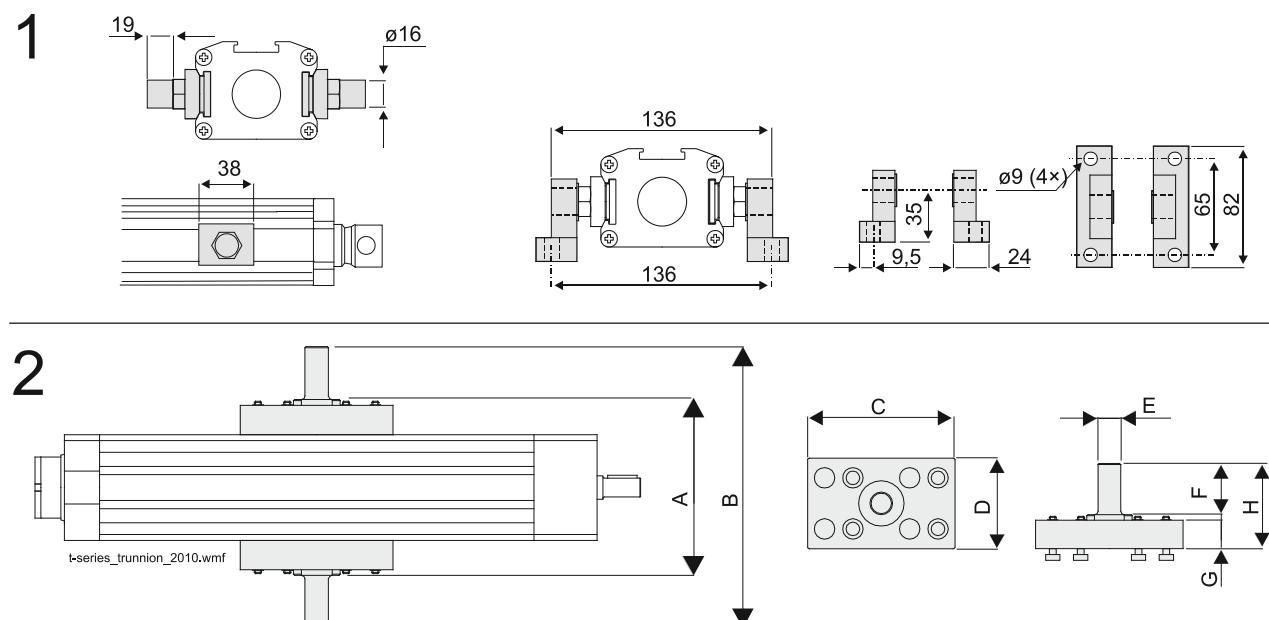

Figure 6: trunnion

	A	B	C	D	E	F	G	H	Tightening torque [Nm]
<b>T09-B</b>	150	240	130	80	ø20 f8	45	25	75	11
<b>T13-B</b>	316	210	180	110	Ø35 f8	63	30	93	45

Table 3: trunnion dimensions

1. Trunnion shafts and trunnion brackets for T60.
2. Trunnion kit for T90 and T130.

Make sure to mount the bearings on the trunnion shafts as close to the unit as possible!

## 2.6 Mounting of worm gear type BS40 / BS50

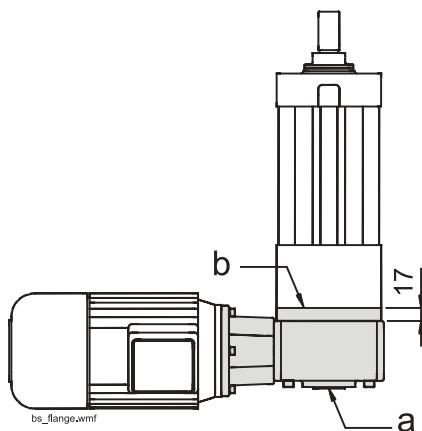

Figure 7: flange for worm gear type BS40 / BS50

To be able to mount a worm gear (a) of type BS40 (for T90 only) or BS50 (for T130 only) an intermediate flange (b) must be used. There is no flange available for T60.

## 2.7 Installation of magnetic sensors

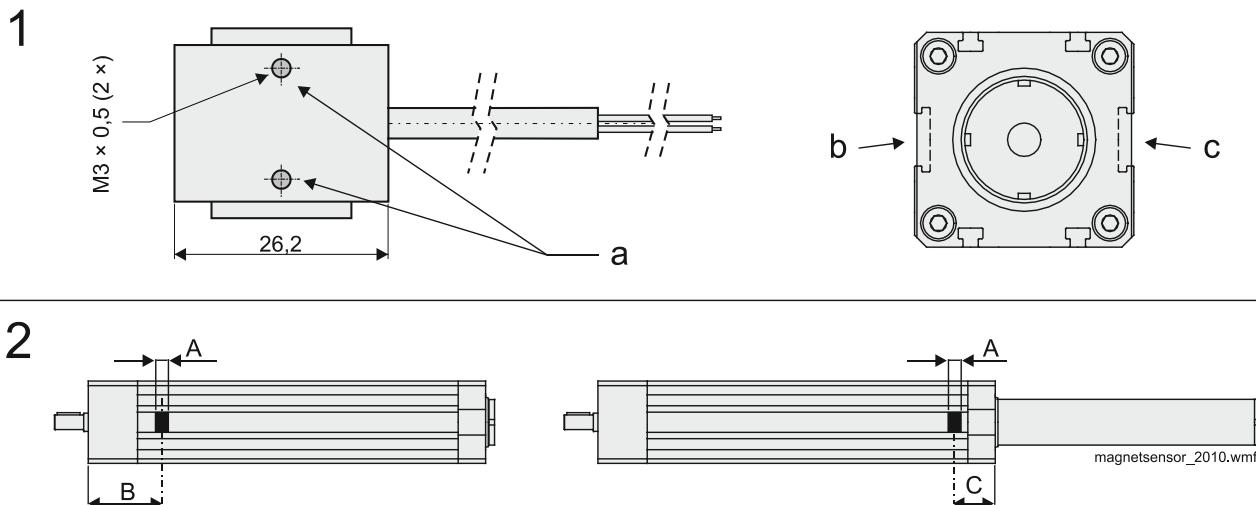

Figure 8: magnetic sensor

1. The sensors are fixed in the desired position with set screws (a) in the T-slot. On T60 units there is only one T-slot for sensors (b) while T90 and T130 has two (b and c).

2. Magnet width (A) and magnet position (B) for the actuator at fully retracted (left panel) and fully extended (right panel) positions, respectively. The positioning of the sensor highly depends on the application since traversing speed, load, deceleration and the motor/drive combination will all influence how quickly the unit will stop after the sensor sent the signal. Thus, the sensor must be positioned accordingly. For safety, we recommend that minimum 25 mm is added for the "B" and "C" values in the table below to prevent the unit hitting the mechanical ends, (e.g. 55 + 25 and 118 + 25).

	A	B	C
<b>T06-B2505, T06-B2525 (T06-B2510, T06-B2550)</b>	5	55	118 (140)
<b>T09-B25</b>	8	141	68
<b>T09-B32</b>	8	82	162
<b>T13-B40</b>	24	194	84
<b>T13-B50</b>	24	324	100

Table 4: magnet positions

### 3. Service and maintenance

#### 3.1 General maintenance instructions

- The customer can perform the service and maintenance described in this manual. Other service ought to be performed by authorised personnel / service workshop.
  - Follow the recommended service intervals. Replace defective parts immediately. Only use parts of the same make and type as original. Ordering data can be found in the spare part lists supplied with the unit. Also state the manufacturing number of the unit (embossed in the drive end).
  - T90 and T130 is not self-braking. This means that the load and the extension tube can move if the driving force is disconnected, or if the motor, gears or brakes are detached during service. This is even more important for vertical applications. Ensure therefore that the load is secured before service is begun.
  - Check the unit in connection to lubrication. Be attentive towards the wear and function of the rod seal, the magnetic sensors, limit switches and the mounting of them. Check all connections to the support and the rod. Also, be attentive towards a changed level of noise. Replace, repair or adjust.
  - Keep the actuator clean. Wipe it off as required, particularly the rod. If cleaning fluid is required, use small amounts and see to it that none gets into the actuator. Do not use strong cleaning agents. Dry it fully.
  - **Never** mix different types of oils / lubricants!
-

### 3.2 Lubrication of the ball screw

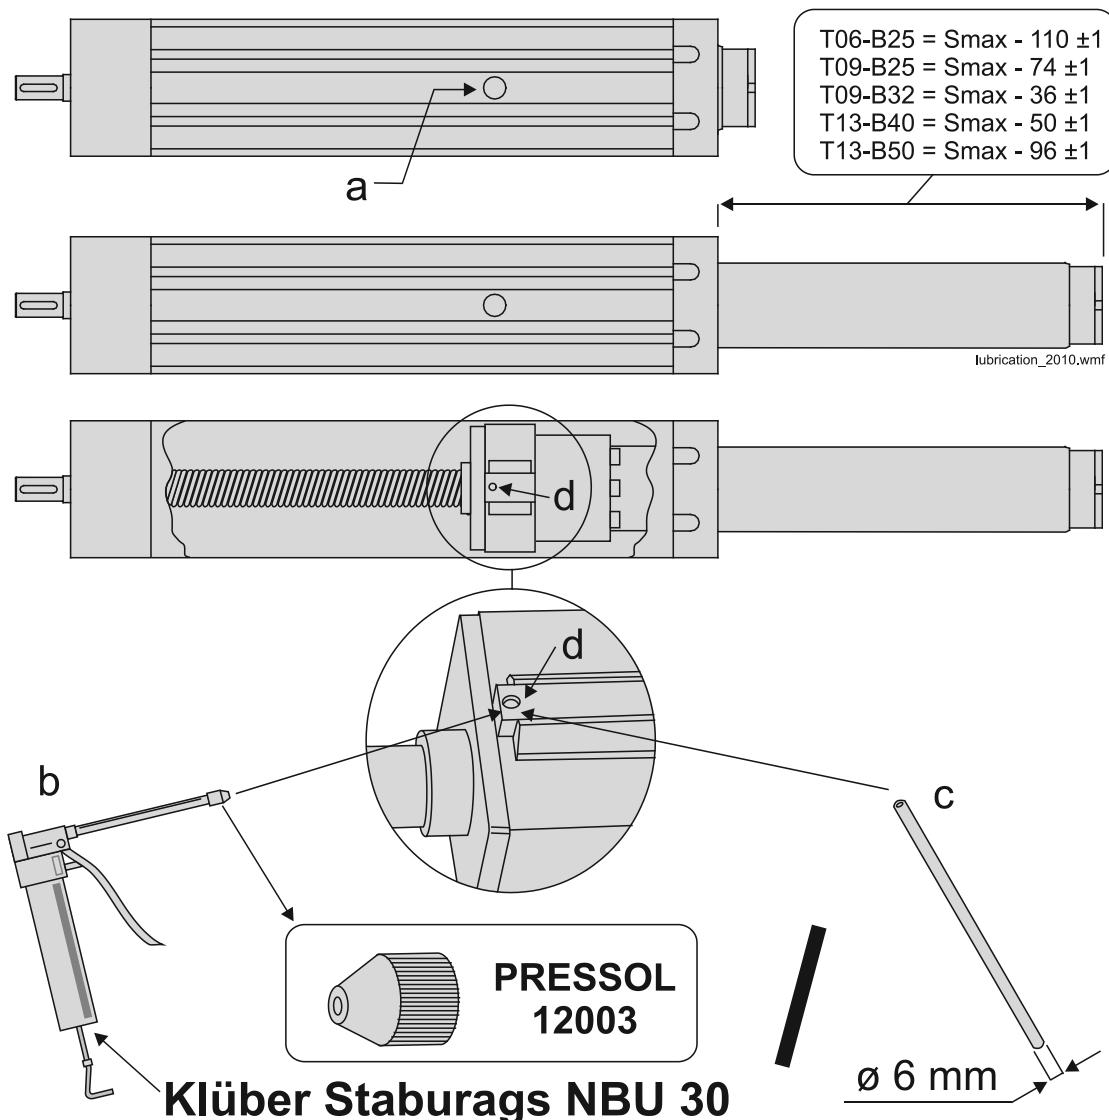

Figure 9: lubrication of the ball screw

1. The ball screw is lubricated every 600 hours of operation or every 6:th month depending on whichever comes first.
2. Recommended lubricant is Klüber Staburags NBU 30.
3. Remove the plastic plug covering the lubrication hole (a).
4. Run the extension tube to the indicated position for the actuator model in question. For T06-B25 the lubrication position is at the maximum stroke length (Smax) of the unit – 110 mm, for T09-B25 it is at Smax – 74 mm, for T09-B32 at Smax – 36, for T13-B40 at Smax – 50 mm and for T13-B50 at Smax – 96 mm.
5. Apply 20 ml of lubricant to the ball nut by sticking a grease gun nipple (b) or a tube (c), through which the lubricant can be applied, straight in to the lubrication hole in the profile so that it enters the lubrication hole (d) of the ball nut assembly. Recommended type of grease gun nipple is Pressol pointed coupler M10 × 1 female article no: 12003 or equivalent. If a tube is used the recommended tube diameter is 6 mm.
6. Pull out the grease gun nipple / tube and put back the plastic plug.

## 4. Technical data

### 4.1 Technical data

	T06-B2505M ••••	T06-B2510M ••••	T06-B2525M ••••
